

# From Metabonomics to Pharmacometabonomics: Mice, Men and Microbiota

Jeremy Everett  
Professor of Pharmaceutical Technologies

Medway Metabonomics Research Group  
University of Greenwich  
Chatham Maritime  
Kent ME4 4TB  
UK

## **Abstract**

This talk will highlight new metabonomics findings from a knockout (KO) mouse model of potential importance to the understanding and treatment of obesity, together with new methods of assessing confidence in metabolite structure elucidation. The development of metabonomics to pharmacometabonomics will also be discussed and the potential for its use in personalised medicine.
