

Sustainability, Technology and Innovation Research Group Report 2010-2020

Anne-Marie Coles, Department of Systems Management and Strategy, University of Greenwich, September 2020

Sustainability, Technology and Innovation Research (STIR) group Report on Activities 2010-2020

In 2010 a Centre for Entrepreneurship and Innovation was established by the Business School, with a programme of academic research led by Dr Anne-Marie Coles and Dr Lin Yan. In 2011 the group refocused on sustainability, technology and entrepreneurship research, directed by Professor Audley Genus and Dr Coles. By 2012 the current governance team was in place, and the group became STIR, led by Dr Coles, with Dr Ian Clarke and Dr Athena Piterou as research co-ordinators, joined by Dr Jin Chan in 2014. In 2015 STIR became a subject group within the newly formed Greenwich Political Economy Research Centre (GPERC), which, since 2018, comprises half of the University recognised Institute for Political Economy, Finance, Governance and Accountability (PEGFA). STIR research focuses on the social study of science, technology and innovation, particularly concerned with sustainability issues. Members of the team have taken responsibility for managing development of specific areas, incorporating an interdisciplinary perspective to the research. Since 2011, STIR has held an annual summer workshop and has contributed to other internal events dedicated to developing a supportive academic culture for research active academics and doctoral students. It has a strong national and international academic network, and to date, members have participated in founding two professional organisations.

Research Themes

The primary objective is to investigate how processes of technical change facilitate social embedding and cultural resilience of new technologies. Research projects are framed at either the societal or actor level, and perspectives include:

- Processes of technological change at the societal level, including communicative interaction and knowledge exchange through innovation networks; critical evaluation of innovation models, such as sustainable transitions, large technical systems and innovation ecosystems.
- Micro-level focus on technology adoption, domestication, technological risk and participation taking perspectives from individual (entrepreneurs, technology users) and group (community associations, system builders) intentions, actions and discourses relating to socio-technical change.

Currently the research programme has two core themes: sustainable innovation and enterprise; and science, technology innovation and culture. STIR has retained a primary focuson the application of concepts drawn from science, technology and innovation studies to analyse socio-technical relations within these core areas.

Sustainable innovation and enterprise

This theme investigates emergence of low carbon technologies. Study has focused on three key areas: e-mobility, energy system reform, and sustainable regional regeneration. Theoretical approaches taken have included sustainable transitions, technology domestication and socio-technical imaginaries in policy analysis. Investigation of the longer-term dynamics of infrastructure change has revealed the complexity of socio-technical interrelationship in reforming socially embedded large technical systems. In addition, this theme incorporates an interdisciplinary approach, including perspectives such as sustainable tourism, urban regeneration, housing studies and entrepreneurship.

E-mobility: co-ordinator Dr Ian Clarke

Research in this are focuses on the potential for public, private and individual adoption of electric powered vehicles. For example, one project investigated the perceived problem of range anxiety in relation to battery charging. Three technical alternatives have been identified: range extenders, induction charging and battery swapping. A review of European patenting data to identify key technologies and actors supports this work. In addition, a project is underway which investigates the future for e-mobility, focusing on factors which affect public acceptance of fully automated vehicles. The issue of micro-mobility, defined as individual use of electric powered vehicles such as e-bicycles and e-scooters, is being considered from the perspective of barriers to adoption. In terms of public transport, revival of the tramways in European urban areas is being studied. This project is focusing on the role of sustainability discourses in local decisions on tramway revival. In addition, study of the UK situation has taken a longer-term perspective, investigating factors which affected initial development and subsequent abandonment of tramway systems. This perspective is expected to reveal the local, contextual factors behind obsolescence of large technical systems.

Energy system renewal:co-ordinators Dr Anne-Marie Coles and Dr Athina Piterou

Projects in this theme have focussed both on the potential for adoption of renewable energy technologies and on the question of energy efficient housing. One project reviewed public perception and reception of renewable technologies in Europe, while others have looked at their dissemination and uptake. Social network maps have been constructed of single building use of renewable energy technologies in London, which demonstrate the currently fragmented nature of adoption practices. Other projects include evaluation of the future for combined heat and power, assessment of the bio-fuel value chain and dynamics of energy transitions. On the issue of housing, projects have focussed on domestic retrofitting with energy efficient technologies and potential for wider adoption of energy positive, Passivhaus solutions in the UK.

Innovation, sustainability and place: co-ordinator Dr Jin Chan

This topic considers how adoption of sustainable innovation is contingent on local socio-cultural factors. A past project investigated installation of solar water heaters on buildings in a UNESCO World Heritage Site, Honghe Hani China. Other approaches have focussed on the role of sustainability discourse in urban regeneration initiatives in Port Harcourt, Rivers State, Nigeria, and a socio-technical analysis the UK Northern Powerhouse policy. In addition, STIR is part of the University's participation in FACET, a 2 Seas/Interreg project investigating sustainable regeneration of coastal areas in three European countries, running until 2022.

Science, technology innovation and culture

This theme comprises three areas: innovation and culture; digital media, and the relation between knowledge and technique. The main focus is on dynamics of production and consumption of socially situated technical knowledge. The aim is to elucidate how cultural issues affect national innovation contexts, particularly for small firms, the specificity of innovation experiences, and the tacit, embodied nature of technical knowledge.

Innovation and culture:co-ordinator Dr Athina Piterou

Projects have focussed on the issue of niche innovation, particularly international differences in innovation contexts, such as comparing experiences of small innovating firms in different European countries. Industrial decline also affected by changes in cultural context, with firms retreating to innovation niches. These processes have been studied in the decline of UK decorative glass manufacturing and the role of the trolley bus in mitigating the loss of tramways. Two projects are investigating how innovation affects enterprises in the cultural sector. The first focussed on innovation and entrepreneurship amongst artists' networks in George Town Malaysia, while the other is assessing accountability and financial sustainability in the UK voluntary sector. Another project is examining the ways in which market devices, technical instruments that construct markets, are adapted for local use. This work investigates how such devices performed in the early configuration of retail innovation, and the means by which they could be readapted in response to the dynamics of change in this sector. A final strand of research is investigating how scientific and technological knowledge is represented in popular culture.

Digital media: co-ordinators: Dr Anne-Marie Coles, Dr Athena Piterou and Dr Jin Chan

Digital innovation is reconfiguring access to cultural experience. Past projects have investigated how the practices of reading and music production have been affected by innovation in digital technologies. Another study is assessing the disruption of business models in the entertainment sector through application of AI technologies, on-demand platforms and the emergent virtual reality ecosystem. Other projects have investigated student access and use of digital devices in Higher Education learning

Knowledge and technique: co-ordinator Dr A-M Coles

This theme considers techniques, tools and routines as a standardised means of knowledge transfer across a range of activities, including management practices and technology policy administration. Two projects are examining these issues. An action research approach to training lecturers in drama techniques to evaluate the potential for enhanced effectiveness and student engagement. In addition, the wellness industry is a site where traditional technique-based therapies conflict with demands for scientific evidence of efficacy. This project is examining the relationship between traditional knowledge and innovation in this sector which is now a global business worth around \$4 trillion.

Research impact

Dissemination and impact:

Regular presentations take place both through internal and external seminars, workshops and conferences. Working papers are available from the University library database, and research findings have also been published in professional media. STIR members have contributed to networking events hosted by the Faculty of Business for local policy makers. Research findings from the 'New Deal for Innovation' project have been used in setting up an innovation guidance website for small firms, and outcomes from the ECOTEC project were disseminated via a Local Authority policy bulletin.

Research informed teaching:

STIR academics are responsible for delivering subject specialised courses for the BA Hons Business Entrepreneurship and Innovation at level 5 and 6. Dr Clarke is the course leader for entrepreneurship teaching, while Dr Coles runs courses on innovation at both levels. Dr Piterou is course leader for the level 6 Sustainable Business Development course. These teaching areas all feature case studies and findings from the on-going STIR research programme, communicating the latest developments to students. In addition, Dr Robson is in the process of developing drama-based training opportunities for University of Greenwich Post Graduate Certificate in Education students, and for professional development of current staff in the Business Faculty. Both Dr Piterou and Dr Robson have organised specialist sessions for the Business Faculty's annual teaching festival.

Funded research

STIR research has attracted funding, both externally at National and European levelsand internally from the University of Greenwich. Past and present projects include:

2020-2022 EU Interreg 2Seas FACET Project: Facilitate the adoption of circular entrepreneurship in the tourism and leisure sector (Dr J Chan, Professor P Ieromonachou; Professor D Adebanjo; Dr AM Coles; Dr A Piterou; Dr C Han; Dr A Chen)

2017-2019 ESRC/Newton Fund: *Social network analysis of innovation clusters increative and cultural value chain: Case of George Town World Heritage Site* (Dr J Chan, Dr A Piterou; Research Fellows: Dr Shih-Yu Chen, Dr Molly Williamson Jack)

2013-2015 British Academy & Society for the Advancement of Management Studies - *Innovation in electric vehicles* (Dr I Clarke, Dr A Piterou)

2013-2015 EU Interregprogramme France (Channel) – England – ECOTEC 21: WP 4: *Issues affecting end user propensity to adopt new electricity generation technologies and participate in novel governance arrangements* (Dr A-M Coles, Dr A Piterou)

2010-2012 EU Interreg France- England programme – *New deal for innovation* (Professor C Birch, Dr A Piterou)

University of Greenwich, Faculty of Business and PEGFA Small Grant Awards:

2017-2020 Tram and light rail re-emergence: Evidence from three European countries (I Clarke, A Piterou, A M Coles)

2012-13Adoption and diffusion of renewable energy technologies in London (A Piterou, A M Coles)

2010-11 International Entrepreneurship and Traditional Chinese Medicine (A M Coles, L Yan)

Events

STIR sessions at international conferences

'Users, niches & regimes: persistence, learning and empowerment' at the 6th International Sustainability Transitions (IST) Conference, University of Sussex, August 2015

'Learning from failure: decline, displacement and defeat of process technologies', SPRU 50th Anniversary Conference, University of Sussex, September 2016

STIR hosts

Annual 'Research: review and development' workshops at the University of Greenwich

Sustainability Technology and Innovation Research (STIR) group and Greenwich University Staff/Student Eco-teamJoint Meeting: *Communicating Climate Change*, December 2019

Technology and Culture International Research Workshop, July 2018

First Sustainable Transitions Research Network '*PhDs in Transitions*' Conference, 2016, organised by Dr Anton Sentić.

In association with RISE (Responsible Innovation and Sustainable Innovation), University of Kingston

Responsible Innovation and Sustainable Entrepreneurship workshop: Research Methods for Doctoral and Early Career Researchers, July 2015

International workshop: Small steps towards sustainability: exploring the distributed, fragmented and piecemeal aspects of socio-technical change, June 2016

Perspectives on Responsible Innovation and Sustainable Entrepreneurship, ECR and Doctoral students'workshop, June 2017

Doctoral students

Past students:

Dr Rosita Aeisha (2017) Domesticating energy efficiency technologies: Understanding the 'adopter' perspectives of UK homeowners in existing housing (VC Scholarship)

Dr Idil Ersoy (2014) Learning on the move: The potential impact of new mobile technologies on students' learning

Dr Molly Williamson Jack (2020) Sustainable Project Management in Urban Development Projects: A Case Study of the Greater Port Harcourt City Development Project, Rivers State, Nigeria.

Dr AntonSentić, (2017) Dynamics of sustainability transition processes: the example of combined heat and power in the UK (VC Scholarship)

Dr RobertRobson (2019) The use of drama-based techniques in higher education teaching.

Continuing students:

Muna Amir – The 'Northern Powerhouse' as a socio-technical imaginary

Ihator Brown - Youth charity attitudes toward financial sustainability

Silvana Croft - How has the transition from analogue to digital technology impacted diversity within the British film industry?

Allen Duncan – Policies for energy positive urban housing development

Abdul Raouf Sakhizada – User perceptions of privacy and security issues in the development and adoption of autonomous vehicles

John Whitley – Students' resistance to 'Wiki' as a team-basedlearning technology

Network links

Research activities are supported through external network links. STIR academics were participant in founding RISE (Responsible Innovation and Sustainable Entrepreneurship), Kingston University, and the Association for Study of Innovation, Science and Technology (AsSIST-UK), which is the national professional association for academic research into science, technology and innovation studies.

Other research links exist with the Centre for World Economic History (CWEH) at the University of Sussex; School of Engineering and Materials Science, Queen Mary College, University of London; International Institute of Management in Technology, University of Fribourg, Switzerland; Zhejiang University, China Art Therapy Academy, Penang and UniversitiSains Malaysia (USM).

STIR researchers are members of academic networks such as European Association for the Study of Science and Technology (EASST); Sustainable Technologies Research Network (STRN); and the Sustainable Consumption Research and Action Initiative (SCORAI)
