

PROCEEDINGS

OF THE 18TH INTERNATIONAL CONFERENCE ON
THE FOUNDATIONS OF DIGITAL GAMES

FDG 2023

Lisbon, Portugal
April 11-14, 2023

Phil Lopes, Lusófona University
Filipe Luz, Lusófona University
Antonios Liapis, University of Malta
Henrik Engström, University of Skövde
Editors

Organized by the Society for the Advancement of the Science of Digital Games in cooperation with ACM & ACM SIGGRAPH, SIGAI, SIGCHI

**The Association for Computing Machinery
2 Penn Plaza, Suite 701
New York New York 10121-0701**

Program Committee

General Chair: Phil Lopes, Filipe Luz

Program Chair: Antonios Liapis, Henrik Engström

Local Chair: Anna Coutinho, Micaela Fonseca, Nuno Fachada, Pedro Neves

Keynote Chair: Mike Cook

Workshops & Panel Chair: David Melhart

Doctoral Consortium: Amy Hoover, Christoph Salge

Competition Chair: Rui Prada

Conference track chairs:

Technical Game Development, Novel Controllers: Shuichi Kurabayashi

Game Design, Novel Mechanics, Novel Experiences: Petri Lankoski

Game Analytics and Visualization: Simone Kriglstein

Game Artificial Intelligence: Raluca Gaina

Game Criticism and Analysis: Katta Spiel

Games Beyond Entertainment: Rafael Bidarra

Late Breaking Short Papers: Laura Levy, Henrik Warpefelt

Workshop organizers:

Workshop on Tabletop Games: Micael Sousa, Hamna Aslam, Akrivi Katifori, Joseph Alexander Brown, Antonios Liapis

Workshop on Combating Toxicity, Hate, and Harassment in Online Games: Julian Frommel, Regan Mandryk, Alessandro Canossa, Bastian Kordyaka, Yubo Kou, Rachel Kowert, Selen Turkey

Workshop on Procedural Content Generation: Alberto Alvarez, Bahar Bateni, Diogo Rato

Academic Game Development: Marcello A. Gómez Maureira, Giulio Barbero, Isabelle Kniestedt, Pedro Neves, Carla Sousa, Arianna Boldi, Mike Preuss

Workshop on Eudaimonia in Digital Games: Tom Cole, Alena Denisova, Jo Iacovides

Workshop on Human-AI Interaction Through Play: Jichen Zhu, Mike Preuss, Antonios Liapis, Casper Hartevelt, Alena Denisova, Seth Cooper, Guillaume Chanel

Program Committee Members:

PC members with Exceptional Service are marked with ☆

Adam Clayden, *University of Suffolk*☆
Agata Waszkiewicz, *Maria Curie-Skłodowska University*
Ahmed Khalifa, *University of Malta*☆
Alan Mattiassi, *University of Udine*
Alberto Alvarez, *Malmö University*☆

Foreword

Welcome to Lisbon! It is with great pleasure that we welcome you to the 2023 International Conference on the Foundations of Digital Games (FDG'23). FDG takes pride in being an interdisciplinary conference exploring the present, past and future of digital game research from design and technology to game studies and artificial intelligence. This provides the perfect milieu for academic discussion, collaborations and interdisciplinary research opportunities.

This year FDG'23 will take place in Lisbon, Portugal one of the western-most countries of Europe, where one might gaze at the vastness that is the Atlantic ocean from one of the multiple vistas spread around town or get lost in the labyrinth that is the “old town”. If attending the conference from the comfort of your chair at home (or work), a live stream of all talks and keynotes will be provided in addition to the official FDG'23 Discord allowing everyone to be part of the discussion even if afar.

The theme for FDG'23 is “New Beginnings”. The world just recently came out of a global pandemic and still continues to face mounting crises and uncertainties. More than ever, digital games need to contribute to bringing cultures and generations together. It is also about challenging the *status quo*, such as current practices in user studies, game technology, game design and evaluation, reaching deeper understandings of user experiences, and fostering better representation and inclusivity in playable media. Unprecedented from previous iterations of FDG, this year the conference takes place in Spring, rather than the original Summer and Fall timeline. This change marks a purposeful shift for the conference serving as a stepping stone to bolster opportunities for authors within the field by reducing the amount of overlapping events that commonly tends to occur with the old timeline.

A total of 101 submissions were received for the full paper research tracks, with an overall acceptance rate of 38.6% (39 papers were accepted). This goes in line with the previous iterations of the FDG conference. The short paper track received a total of 38 submissions, with 18 acceptances (a rate of approx. 47.4%). FDG'23 is also hosting six different workshops, five of which have papers published in these proceedings. Workshops include regulars such as the *Procedural Content Generation* and *Tabletop* Workshops, which have been consistently running at FDG for the last few years, while the *Academic Game Development* workshop is also returning since its debut last year. Debut workshops include: *Combating Toxicity, Hate, and Harassment in Online Games*, *Eduaimonia in Digital Games* and *Human-AI Interaction Through Play*. FDG'23 also includes four keynotes, one panel, six demos and four presentations at the Doctoral Consortium.

To conclude, we would like to thank the authors, reviewers, invited speakers, chairs and administrative staff at ACM and TAPS for ensuring the quality of FDG'23. Furthermore, we want to especially thank this year's sponsors, Microsoft and FilmEU, for their support in organizing the event. We look forward to an engaging and fruitful FDG conference.

Phil Lopes & Filipe Luz, General Chairs

KEYNOTES

Keynotes

Xalavier Nelson Jr.

Xalavier Nelson Jr. is a BAFTA-nominated studio head, narrative director, and writer, with dozens of titles under his belt including *Reigns: Beyond*, *Hypnospace Outlaw*, *An Airport for Aliens Currently Run by Dogs*, *Space Warlord Organ Trading Simulator*, and *El Paso, Elsewhere*. He also makes strides in a burgeoning storytelling career outside of games, with releases such as the cult hit comic *Sherlock Holmes Hunts the Moth Man*.

Kaitlyn Jones

Kaitlyn Jones is a Program Manager on Xbox's Gaming Accessibility Team at Microsoft, Doctor of Occupational Therapy, an Director of Clinical Outreach for the accessible gaming non-profit organization Warfighter Engaged. Her primary roles at Microsoft include driving accessibility initiatives across Xbox hardware and platform programs and creating accessibility resources for game developers including the award-winning Microsoft Gaming Fundamentals Training and recent updates to the Xbox Accessibility Guidelines. Kaitlyn is a life-long gamer and passionate advocate for the creation of accessible solutions within all mainstream technologies.

KEYNOTES

Holly Nielsen

Holly Nielsen is a historian, writer, and narrative designer based in London. She is currently completing her PhD at Royal Holloway, University of London. Her thesis is titled 'British Board Games and the Ludic Imagination, c.1860-1960'. Alongside her academic work Holly does writing and narrative design for video games. Before pivoting to academia and games, Holly was a journalist and arts critic, with bylines including *The Guardian*, *The New Statesman*, and *Vice*, among others.

Rémy Devaux

Rémy Devaux solo creator of small games since 2016, and developer of their own game engine SUGAR since 2018. In 2021 they founded PUNCKAKE Délicieux along with fellow Pico-8 enjoyer Benjamin Soulé and chiptune extraordinaire Pentadrangle. The studio's goal is to make a new game every month, constantly exploring new ideas while also delivering well-crafted experiences. Remy makes some of the games but also does engine upkeep and marketing for all the games.

Conference Track Papers

☆: Best Paper ◆: Honorable Mention

Technical Game Development, Novel Controllers

- ScriptButler Serves an Empirical Study of PuzzleScript: Analyzing the Expressive Power of a Game DSL through Source Code Analysis** Article 1
by Clement Julia and Riemer van Rozen
- Automated Generation of Map Pieces for Snappable Meshes** Article 2
by Diogo de Andrade and Nuno Fachada
- Modulith: A Game Engine Made for Modding** Article 3
by Daniel Götz and Sebastian von Mammen

Game Design, Studio Practices, Novel Mechanics, Novel Experiences

- A Visual Ethnographic Study at Cultural Spaces to Identify Character Creation Opportunities** Article 4
by Sai Siddartha Maram, Johannes Pfau, Jai Bhagu Dodechani, and Magy Seif El-Nasr
- Impact of BCI-Informed Visual Effect Adaptation in a Walking Simulator** Article 5
by Max Chen, Erin Solovey, and Gillian Smith
- Integrating Players' Perspectives in AI-Based Games: Case Studies of Player-AI Interaction Design** Article 6
by Jennifer Villareale, Sai Siddartha Maram, Magy Seif El-Nasr, and Jichen Zhu
- V-Light: Leveraging Edge Computing for the Design of Mobile Augmented Reality Games** ◆ Article 7
by Noor Hammad, Thomas Eiszler, Robert Gazda, John Cartmell, Erik Harpstead, and Jessica Hammer
- The Challenge of Evaluating Player Experience in Tabletop Role-Playing Games** Article 8
by Antonios Liapis and Alena Denisova
- Press H to Help: The Impact of Prosocial Video Games on Prosocial Behaviors by Exposure Time** Article 9
by Danielle Langlois, Scott Drury, and Simone Kriglstein
- Tutorial Level Design Guidelines for 2D Fighting Games** Article 10
by Mursyid Ibrahim, Penny Sweetser, and Anne Ozdowska

Three Design Themes for Collaborative Alternative Controllers by Erin J.K. Truesdell and Brian Magerko	Article 11
Shoelace: A Storytelling Assistant for GUMSHOE One-2-One ☆ by Devi Acharya, Jack Kelly, William Tate, Maxwell Joslyn, Michael Mateas, and Noah Wardrip-Fruin	Article 12
CSSII: A Player Motivation Model for Tabletop Games by Carlos Martinho and Micael Sousa	Article 13
Playable Quotes for Game Boy Games ☆ by Joël Franusic, Kathleen Tuite, and Adam M. Smith	Article 14
Behind the Door: Exploring Horror VR Game Interaction and its Influence on Anxiety by Marta Ferreira, Ana Pinha, Micaela Fonseca, and Phil Lopes	Article 15
Game Analytics and Visualization	
Multiplayer Tension in the Wild: A Hearthstone Case by Paris Mavromoustakos-Blom, David Melhart, Antonios Liapis, Georgios N. Yannakakis, Sander Bakkes, and Pieter Spronck	Article 16
Not Tekken Seriously? How Observers Respond to Masculine and Feminine Voices in Videogame Streamers ☆ by Susanne Poeller, Alexandra Steen, Nicola Baumann, and Regan L. Mandryk	Article 17
The Right Variety: Improving Expressive Range Analysis with Metric Selection Methods ◆ by Oliver Withington and Laurissa Tokarchuk	Article 18
Telling Eyes: Linking Eye-Tracking Indicators to Affective Variables by Andreas Winklbauer, Barbara Stiglbauer, Michael Lankes, and Maurice Sporn	Article 19
Game Artificial Intelligence	
Better Resemblance without Bigger Patterns: Making Context-sensitive Decisions in WFC ◆ by Bahar Bateni, Isaac Karth, and Adam M. Smith	Article 20
Automated Testing in Super Metroid with Abstraction-Guided Exploration by Ross Mawhorter and Adam Smith	Article 21
Following the Leader in Multiplayer Tabletop Games by James Goodman, Diego Perez-Liévana, and Simon Lucas	Article 22

CONFERENCE TRACK PAPERS

- Sturgeon-GRAPH: Constrained Graph Generation from Examples** Article 23
by Seth Cooper
- Towards an Understanding of Character Believability** Article 24
by Rehaf AlJammaz, Noah Wardrip-Fruin, and Michael Mateas
- Why Oatmeal is Cheap: Kolmogorov Complexity and Procedural Generation**★ Article 25
by Younès Rabii and Michael Cook
- Believability, Anticipation, and... Timing – Improving Believability through Timing Manipulation** Article 26
by João Silva, Ricardo Rodrigues, and Carlos Martinho
- Game Criticism and Analysis**
- The Constraints of Cozy Games: *Boyfriend Dungeon* and Consent in Queer Play**★ Article 27
by Anne Sullivan, Mel Stanfill, and Anastasia Salter
- Igniting the Spark: Analog to Digital Adaptation of Narrative Affect and Player Subjectivity in Magic: The Gathering through Analog to Digital Adaptation** Article 28
by Jack Murray
- The Soundtrack's Influence on the Portrayal of the Vietnam War in Battlefield: Vietnam** Article 29
by Neil Spiteri and Costantino Oliva
- Merits of Gamification: Transmediality and Spatiality of *Walden, a Game***◆ Article 30
by Renata E. Ntelia
- If Your Empire Last More Than Two Centuries, You May Need to Speak to Your Doctor: The Effects of Historicizing Discourse in the Crusader Kings 3 Community** Article 31
by Kirk M. Lundblade
- Shippers and Kinnies: Re-Conceptualizing Parasocial Relationships with Fictional Characters in Contemporary Fandom** Article 32
by Trisha Nguyen, Mohammed Khadadeh, and David C. Jeong

Games Beyond Entertainment

Wrapped in Story: The Affordances of Narrative for Citizen Science Games☆ Article 33
by Josh Aaron Miller, Katherine Buse, Ranjodh Singh Dhaliwal, Justin Siegel, Seth Cooper, and Colin Milburn

Identifying Body Appreciation by Visualising Actual/Ideal Self-Discrepancy: An Avatar Creation Task Article 34
by Lisa Wagenveld, Christof van Nimwegen, and Sander Bakkes

'The Bandwidth Comes and Goes': Gaming Preferences, Habits and Attitudes in a Persistent Low Mood Population Article 35
by Laura Helsby, Jo Iacovides, and Paul Cairns

Procedural Generation of Challenges for personalized Gait Rehabilitation Article 36
by Silong Lyu and Rafael Bidarra

Lessons Learned from Video Game Players Sorting Genomes Article 37
by Rogerio de Leon Pereira and Olivier Tremblay-Savard

Under Pressure: A Multi-Modal Analysis of Induced Stressors in Games for Resilience Article 38
by Reza Habibi, Johannes Pfau, Sai Siddartha Maram, Jiahong Li, Bjarke Larsen, Jason Xu, Atieh Kashani, Shweta Sisodiya, Jonattan Holmes, Zhaoqing Teng, Elin Carstensdottir, and Magy Seif El-Nasr

First Experiments with an Applied Gaming Intervention for Reducing Loneliness of Children with Chronic Illness: Lessons Learned Article 39
by Dionysis Alexandridis, Sander C.J. Bakkes, Sanne L. Nijhof, Elise M. van de Putte, and Remco C. Veltkamp

Late Breaking Short Papers

Multilayer Map Generation Using Attribute Loss Functions Article 40
by Runze Tang and Penny Sweetser

Ecosystems of Indie Porn Game Development: Co-Dependent Partial Organisations Article 41
by Mikolaj Dymek and Petri Lankoski

Introducing QRogue: Teaching Quantum Computing Using a Rogue-Like Game Concept Article 42
by Michael Artner, Günter Wallner, and Robert Wille

CONFERENCE TRACK PAPERS

- 1960s Cybernetics and the Unfulfilled Promise of Digital Play◆** Article 43
by Bart Simon, Darren Wershler, and Angelica Calcagnile
- StoryWorld: Procedural Quest Generation Rooted in Variety Believability** Article 44
by Vincent L. Prins, Jelmer Prins, Mike Preuss, Marcello A. Gómez-Maureira
- Dual Critic Conditional Wasserstein GAN for Height-Map Generation** Article 45
by Nuno Ramos, Pedro A. Santos, and João Dias
- Predicting Tetris Performance Using Early Keystrokes** Article 46
by Gianluca Guglielmo, Michal Klincewicz, Elisabeth Huis in 't Veld, and Pieter Spronck
- Towards a Unified Language for Card Game Design** Article 47
by Riemer van Rozen, Anders Bouwer, and Karel Millenaar
- Sailing through Signs: Attention Guidance towards Texts in Virtual Reality** Article 48
by Philipp Asteriou, Leopold Boess, Laura Jirawa, Chiara Gulino, Philipp Guggenberger, and Michael Lankes
- Physiological-Based Difficulty Assessment for Virtual Reality Rehabilitation Games◆** Article 49
by Pedro Rodrigues, Micaela Fonseca, and Phil Lopes
- QuestVille: Procedural Quest Generation Using NLP Models** Article 50
by Suzan Al-Nassar, Anthonie Schaap, Michael van der Zwart, Mike Preuss, and Marcello A. Gómez-Maureira
- Gamification Framework for Reinforcement Learning-based Neuropsychology Experiments** Article 51
by Mounsif Chetitah, Julian Müller, Lorenz Deserno, Maria Waltmann, and Sebastian von Mammen
- Record, Review, Edit, Apply: A Motion Data Pipeline for Virtual Reality Development Design** Article 52
by Sarah Hofmann, Cem Özdemir, and Sebastian von Mammen
- Leveraging Game Design Activities for Middle Grades AI Education in Rural Communities** Article 53
by Jessica Vandenberg, Wookhee Min, Veronica Cateté, Danielle Boulden, and Bradford Mott
- Peak-End Rule in Narrative Videogames: Analysis of Player's Perceptions on Social Media about "The Last of Us Part II" and "God of War"** Article 54
by Dalila Martins, Ana Patrícia Oliveira, and Nelson Zagalo

Modifying a Game to Study the Impact of an Hostile Environments on Foraging Behavior	Article 55
by Cania Antariksa, Céline Besse, Thomas de Bruijn, Brandon A.T. Kroes, Lennard Schaap, Elze de Vink, Judith Schomaker, and Marcello A. Gómez-Maureira	
Towards an Agency-Centered Ontology of Game Mechanics	Article 56
by Kyle Mitchell and Joshua McCoy	
Towards a History of Finnish and Swedish Game Industry Platforms	Article 57
by Petri Lankoski and Mikolaj Dymek	

Workshop Papers and Presentations

Workshop on Tabletop Games

The aim of the 5th workshop on Tabletop Games is to address ways in which academics can apply their tools to the discussion of analog games; this includes but is not limited to board games, war games, tabletop role-playing, collectible card games and other miniature games. The workshop also aims to highlight the connections between analog and digital games, either approaching the prototyping and playtesting aspects or exploring the hybrid dimension of games directly influenced by the analog dimension.

Organizers:

Micael Sousa, Hamna Aslam, Akrivi Katifori, Joseph Alexander Brown and Antonios Liapis

Papers

- Playing a Flawless Character? Exploring Differences Between Experts and Novices in Tabletop Role-Playing Games and Potential Benefits for Well-Being** Article 58
by Susanne Poeller, Martin Dechant, and Regan L. Mandryk
- A Framework for Analogue Game-Modification Learning: Guidelines to Lower Barriers for Games in Education** Article 59
by Christian Paller
- “Show Your Cards!”: What Do Creators Need for the Game Design Process?** Article 60
by Lori Kougioumtzian, Christos Lougiakis, and Akrivi Katifori
- Computer Aided Content Generation – A Gloomhaven Case Study** Article 61
by Kristian Tjibben and Marcus Gerhold
- Historical Reality vs Anachronistic Fantasy: The History Educators’ Perspective on Tabletop RPGs** Article 62
by Dimitra Petousi, Akrivi Katifori, Maria Roussou, Yannis Ioannidis, and Pantelis Sakellariadis
- “It Has to Ignite Their Creativity”: Opportunities for Generative Tools for Game Masters** Article 63
by Kevin Tang, Terra Mae Gasque, Rachel Donley, and Anne Sullivan

Workshop on Combating Toxicity, Hate, and Harassment in Online Games

While online multiplayer games are great in many ways (e.g., supporting social connect- edness), they are also platforms on which players can experience or witness toxicity, hate, and harassment. These behaviours are potentially harmful for players and ubiq- uitous in many games, despite substantial work on combating them. In this workshop, we want to bring together researchers from different backgrounds to build a commu- nity, identify current challenges, imagine potential solutions, and foster collaborations aiming to help combat toxicity, hate, and harassment in online games.

Organizers:

Julian Frommel, Regan Mandryk, Alessandro Canossa, Bastian Kordyaka, Yubo Kou, Rachel Kowert and Selen Turkey

Workshop on Procedural Content Generation

Procedural Content Generation (PCG) attracts significant interest from both academia and the games industry where it has been researched and used extensively. PCG has the potential of substantially reducing the authorial burden in game creation, improving the theoretical understanding of game design and realizing its automation, and enabling entirely new forms of games and playable experiences.

This workshop aims to advance knowledge in PCG by bringing together researchers and developers, and facilitating discussion on practices, opportunities, and challenges within the field. Likewise, one of the aims is to help bridge the gap between academia and industry by giving space to both to present, discuss, and engage in fruitful dialogue. To support these goals, this year we provide multiple submission possibilities: full/short length paper submissions, short position papers, and demonstrations of ongoing projects. Besides these submissions, this year we also support and encourage participants to submit early research ideas and work-in-progress in the form of extended abstracts to be presented and discussed as lightning pitches to get feedback and foster collaboration.

Organizers:

Alberto Alvarez, Bahar Bateni and Diogo Rato

Papers

- Sturgeon-MKIII: Simultaneous Level and Example Playthrough Generation via Constraint Satisfaction with Tile Rewrite Rules** Article 64
by Seth Cooper
- Lode Enhancer: Level Co-Creation through Scaling** Article 65
by Debosmita Bhaumik, Julian Togelius, Georgios N. Yannakakis, and Ahmed Khalifa
- “That Darned Sandstorm”: A Study of Procedural Generation through Archaeological Storytelling** Article 66
by Florence Smith Nicholls and Michael Cook
- Interactive Latent Variable Evolution for the Generation of Minecraft Structures** Article 67
by Tim Merino, M Charity, and Julian Togelius
- Hierarchical Semantic Wave Function Collapse** Article 68
by Shaad Alaka and Rafael Bidarra
- Re-Trainable Procedural Level Generation via Machine Learning (RT-PLGML) as Game Mechanic** Article 69
by Seth Cooper, Emily Halina, Jichen Zhu, and Matthew Guzdial

Level Generation through Large Language Models	Article 70
by Graham Todd, Sam Earle, Muhammad Umair Nasir, Michael Cerny Green, and Julian Togelius	
Conceptual Art Made Real: Why Procedural Content Generation is Impossible	Article 71
by Isaac Karth and Kate Compton	
“Generator’s Haunted”: A Brief, Spooky Account of Hauntological Effects in the Player Experience of Procedural Generation	Article 72
by Max Kreminski	

Academic Game Development – Professionalizing the creation of video games for research purposes

Game design and development for research purposes have been growing in importance. Such ”academic games” are applied games that are created in an academic context. They may involve education, training, support understanding of human behavior, data gathering, or AI training, to name some examples.

Academic game development involves different constraints and opportunities compared to commercial game development. However, there is a lack of published discourse on the idiosyncrasies that accompany academic game development.

The ’AcaDev’ workshop provides a venue for sharing experiences and best practices for academic game development and expanding publications on that topic. Join us for a day of getting into the weeds of academic game development and shaping the discourse surrounding it.

Promotypes – Prototyping Games for a University Game Production Pipeline

by Edward Morrell, Annakaisa Kultima, Ylva Grufstedt, and Tomi Kauppinen

Article 73

Workshop on Eudaimonia in Digital Games

The concept of eudaimonia in the study of video games has been the subject of increasing interest in recent years, especially as juxtaposed to the idea of hedonia which is often assumed as lying at the heart of most video game play experiences. However, there is a lack of consensus on what eudaimonia exactly is, how it manifests in the player experience, and what effect it could have on the emotional experience of game play.

This workshop seeks to bring together researchers from across a broad range of games research fields, such as those represented at FDG. We will discuss this emerging and important concept and potentially create a cross-disciplinary research agenda for delving deeper into how this foundational concept of wellbeing can be applied within the field of digital games.

Organizers:

Tom Cole, Alena Denisova and Jo Iacovides

Workshop on Human-AI Interaction Through Play

Human-AI Interaction is a rapidly growing research area. As Artificial Intelligence (AI) and machine learning (ML) increasingly take over tasks previously performed only by humans, it leads to more situations where humans and machines need to cooperate. In this work, we explore questions around human-AI interaction and cooperation through play. For example, how to design playful interactions that facilitate human-AI teams? Can affects associated with gameplay be used to guide human-AI collaboration? How do we design gameplay where multiple AIs and multiple players interact with one another? In addition to paper presentations, workshop attendees will participate in group discussions and idea formulation.

Panels

Research-Creation of Alternative Controller Games

This panel addresses the emergent field of alternative controller game design in the context of academic research. Alternative controllers are a mix of custom-created devices and / or re-appropriations of conventional input and feedback devices for novel interactions. In this paper, five practice-based researchers address topics and problems inherent to the relationship between alternative controller games and their field of research. Tatiana Vilela dos Santos, is a researcher in alternative controller game design at the University of Lorraine focuses on the specifics of alternative controller game design as opposed to traditional game design. Enric Llagostera, researcher at Concordia University focuses on alternative controller game design as a political practice. Edward Melcer, researcher and professor at the University of California, Santa Cruz, focuses on the educational aspect of alternative controllers. Mona Bozdog, researcher and lecturer in immersive experience design at Abertay University focuses on accessibility issues raised and solved by alternative controller games. Lynn Love, researcher and lecturer in computer arts at Abertay University focuses on the socialisation made possible thanks to alternative controller games.

Members:

Tatiana Vilela dos Santos, Enric Llagostera, Edward Melcer, Mona Bozdog, Lynn Love

Games and Demos

Space Adventure

by José Carlos Neves, Conceição Costa, Andreas Melo, Fernando Soares, João Frade, Carlos Santos, Lília Marcelino and Guilherme Saturno.

Abstract

“Space Adventure: defend the planet!” is a research-based game aimed at supporting a more inclusive education in primary maths for deaf and hard of hearing (DHH) students, as well as to their hearing peers.

In Space Adventure the player controls the Commander, a character in charge of building a space base on another planet. In order to obtain the necessary resources, the player must first build the production plants and then solve challenges inside each of those. By doing that, the player is able to build new production plants and upgrade the existing ones, increasing the resource output. In each production plant one or two mathematical competencies can be improved and, by repeating the necessary actions to obtain the required number of resources, the player develops mathematical dexterity in those areas. Real-time feed-back guides the player through the learning activities, which are integrated intrinsically on the playability. The player uses math skills to solve challenges that emerge organically from the game world and is rewarded with resources that allow progression through the game challenges, as well in acquiring more complex math knowledge. In Space Adventure failure is an opportunity to play again, therefore, to learn.

Baked Burger Bash: A Serious Virtual Reality Game Informing about Effects of Acute Cannabinoid Intoxication

by Anne Vetter, Johannes Büttner and Sebastian von Mammen

Abstract

This paper presents Baked Burger Bash, a serious game that aims to enhance a drug prevention program for adolescents using virtual reality (VR). The game is based on a simulation of acute cannabinoid intoxication embedded in an interactive cooking game. The player takes on the role of a food truck chef who needs to serve up the orders of passers-by. Various effects of the intoxication make it hard to live up to the customers’ expectations. In this paper, we provide the scientific background and feedback by drug prevention experts who have motivated and accompanied the project, that have informed the game’s concept and its iterative development.

Playful Experiences Through ALT+CTRL Games

by Pedro Fernandes, João Cabral and Filipe Luz

Abstract

This research aims to demonstrate that redesigning game display and control devices can provide new play experiences to a developed digital game. Adapting the well-known video game Pong (Atari, 1972) through an alternative rendering interface, this work seeks to explore different gameplay experiences, which resulted in a peculiar version of the game Pong, the HexPong (2022).

The creative possibilities of game designing alternative controller games (alt.ctrl games) can transform the player experience. Thus, this work was oriented to increasing Pong's playfulness, and enhancing the creative possibilities for game design.

Village Druid: Modular Narrative and Dynamic Difficulty Adjustment for Rehabilitation

by Pedro M. A. Fernandes, Pedro Neves, Phil Lopes, Micaela Fonseca, Filipe Pinto, Inês Palmeira and Filipe Luz

Abstract

Village Druid is a virtual reality game for rehabilitation developed as part of the PlayersAll project. In PlayersAll, the objective is to explore how designing a game that treats the patients as players can impact their investment in inherently repetitive rehabilitation treatment. Village Druid seeks to solve these issues by implementing a fantasy narrative that effectively contextualizes the exercises associated with rehabilitation therapy, and by implementing dynamic difficulty adjustment (DDA) mechanics that control the evolution of challenge in the game - adapting it to the player. The game then explores how these systems can be implemented in a format that allows for the adaptation of its content to the variable number of sessions players' may undertake as part of their treatments. Testing done with the prototype has shown that the fantastic context given to the player's actions generates excitement and the partial implementation of the DDA system makes the game more accessible to players. Future work on the prototype would see the implementation of the modular narrative system and further development of the DDA system.

NoFold: A web/VR Hybrid Platform for Board Game Creators

by Christos Lougiakis, Lori Kougioumtzian and Giorgos Ganiias

Abstract

Board game creators face several challenges when developing a physical board game, mostly related to the playtesting phase. Existing digital tools offer possible solutions by allowing remote testing; however, they introduce new issues, due to the limited possibilities to support direct user interaction, communication and social cues. NoFold as an immersive VR application aims to address these challenges by employing the VR medium at the playtesting phase and supporting the interactive manipulation of virtual game components. Coupled with a web platform for the management and design of these components, it offers board game designers new opportunities to design and playtest their games. The application is currently at an early prototype stage, ready to undergo further testing to inform the next steps of design and development.

BabelAR: A collaborative multilingual game for any classroom

by Wim Forceville, Joana Duarte and Thomas Meynen

Abstract

The Virtual Language App, in short VirtuLApp, is a 3-year Erasmus+ Key Action 2 Strategic Partnership project 2019-2022. It aimed at developing an innovative multididactic approach which teachers can use in the classroom in any (multilingual) situation. The needs of teachers - more knowledge about and tools for multilingual education, integration of migrant languages and lesser language separation- will be addressed with the development of a multi-player augmented reality app 'Babelar' about multilingual education and the development of a toolkit with video-based documentation of best-practices of schools already using the heteroglossic approach in the classroom.

Doctoral Consortium

Creating Group Profiles to Enhance Player Experience in Table Top Role-Playing Games

by Ana Pinha, Phil Lopes and Micaela Fonseca

Abstract

Tabletop Role-Playing Games (TTRPG) offer a unique way of experiencing stories and adventures through collaborative storytelling, where creativity and imagination influence the world in which a narrative takes place. Profiling players is quite a common topic when dealing with digital and tabletop games, but a question remains on its applicability for TTRPGs. We propose to generate group profiles, from individual player profiles, which can be used to suggest or adapt game content in a TTRPG setting. When attempting to collect data from such situations, several problems arise, such as what factors are relevant for TTRPG profiling, how we can efficiently collect such data, and whether such models have any value for the players themselves. As such, we intend to compare levels of player satisfaction with the different types of profiles. We predict the results may be applied to preexisting or future tools and recommendation systems.

Player Experience in Exergames with Dynamic Difficulty Adjustment

by Sittikrai Chorrojprasert, Alena Denisova and Ben Kirman

Abstract

A challenge is widely adopted in exergames to motivate players to have physical activity while they are playing the games. However, a one-size-fits-all approach for designing exergames might not be suitable because individual players have different play skills and fitness. Therefore, a dynamic difficulty adjustment (DDA) is utilised to automatically adjust demands and difficulties in an exergame to be suitable for a player. To develop DDA functions in exergames, there are 2 methods commonly used. The first one is a performance-based DDA using in-game performance data (e.g. success rates) with algorithms for changing difficulty levels. The second method is an exercise intensity-based DDA using physiological data (e.g. heart rates) from a player. This research aims to examine how both DDA methods affect player experience (PX). This research will contribute to understanding the effects of DDA on PX and this understanding will be useful for designing and developing DDA in exergames that could promote the motivation of players.

Certified Synthesis for Interactive Media: High Assurance Metroidvania Generation

by Ross Mawhorter

Abstract

Automatically generating level designs for videogames is a complex task, and existing generation techniques can produce levels that are unplayable. While there are ways of detecting and mitigating these flaws, those methods have problems scaling up to the generation of entire game worlds. In my research, I will extend techniques from the field of formal methods in order to synthesize level designs that provably have user-defined playability properties. This research will handle verification over faulty abstractions, and improve the ecological validity of procedural content generation research.

Challenging Assumptions and Fostering Reflection in Physical Puzzle Games

by Rachel Donley

Abstract

This Doctoral Consortium paper outlines PhD work towards designing physical puzzle games that challenge player's assumptions to support teaching social justice concepts and develop methods of reflection to strengthen and retain learning for players beyond the game.
